

Weekly Report

Date: 9/19/2012

Project Name: Infant Respiratory Monitor

Group Number: 11

Group Members: Sean Ermer, Tim Lau, Leo Li

Current status of project:

We are working to gather information regarding the current gold standard of current technology to arrive at a potential solution.

Work completed in the last week:

We have looked extensively into the background of our problem. We've looked at the hypothesis behind what the causes are and we've also looked at current solutions which people have attempted to solve this problem. Specifically, we've been looking into the IP surrounding the project to tell us what's already been done. We're using this information to help us decide on what potential solutions from our end could be.

Work planned for next week:

We plan to have a general idea of what our solution to this problem would be. Hopefully we can back this solution up with relevant calculations and a simple enough design.

Anything needed from client or TA or instructor to continue work:

None.
